

COC-KILLER, THE DELICATE INSECT TRAP

Cockroaches in the house.
Cockroaches in the kitchen.
Cockroaches in the table.
Cockroaches everywhere...
Virtually everyone has been in such a terrible situation at least once. And many people have this problem on their hands at this very moment.

Chemicals: harmful and inconvenient

There is a number of methods to control cockroaches, but most of them imply using chemicals, which is extraordinarily inconvenient for people AND harmful to their health. In workshops and industrial facilities, applying pest control chemicals also means halting production for a considerable period of time.

Cockroaches carry disease

Cockroaches are not just nasty. They are outright dangerous with their habit of running on food and contaminating it with various pathogens.

Cockroaches breed by water

Cockroaches get very active in the night and they always favor sources of water as their destination. Damp cloth on the sink, wet soil in flower pots and such contribute to the increase in the insects numbers.

Sprays are dangerous...

We believe that sprays pose the greatest threat among the insect control products.

The poisoning resulting from spraying around cockroach killer aerosols can put your very life in danger, and the same goes for your pets.

We have developed a simple and quick solution to the cockroach problem: **CocKiller YUTEC.**

It is a case made of hard steel (painted or stainless) with slots for pheromone-impregnated glue boards inside that catch cockroaches quickly and easily. The bottom of CocKiller YUTEC is only about 1 millimeter thick, so it can also trap smaller insects - ants, bedbugs, fleas, etc., as well as various flying insects - moth, fungus gnats, midges.

CocKiller YUTEC is a great solution for most occupying wardrobes too, since it is a closed case and does not do any damage clothes stored within. Worth a separate mention is the unit's capability to catch wasps in vineyards. CocKiller YUTEC needs no electricity or batteries

Specifications

Model	Body color	Protected area, m ²		Body color		Glueboard, type
		Designed	Max	Dimensions, mm, LxWxH	Weight, kg	
CoK-220 W	White	10	30	220 x 140 x 30	0,4	GB-48Y
CoK-220 S/St	Stainless steel	10	30	220 x 140 x 30	0,4	GB-48Y

and therefore works day and night, indoors or outside, requiring no supervision. Installing CocKiller YUTEC on a shelf of inside a table in the kitchen you protect it from a variety of uninvited guests, from ants to mice. CocKiller

YUTEC doubles as a mouse trap, which is also very important. The unit's dimensions allow its installation on the Armstrong suspended ceilings that are often favored by rodents.

Ease of use, reliability and safety.

Virtually any place in the house or outdoors is a perfect location for

CocKiller YUTEC. Its strong body made of stainless steel remains scratchless even if you step on it. While effectively catching insects and smaller rodents, the unit is safe for toddlers and pets, which is a yet another advantage of CocKiller YUTEC.

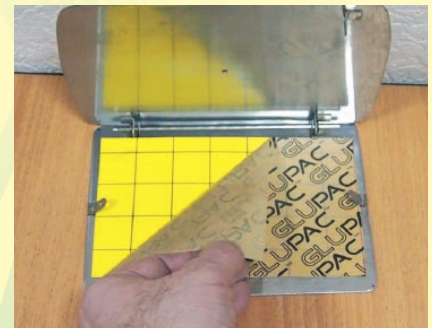

You can also use CocKiller YUTEC to successfully fight pests in greenhouses. The glueboards, which

actually do the job, are always protected from dust, dirt or water. Hang the unit in your vineyard and win the war with wasps there.

Removing trapped insects and rodents is a very simple process: lift the lid, remove the glueboard covered with them, place a new glueboard in its place and close the lid. With the body made of stainless steel, CocKiller YUTEC is a perfect solution for kitchens and medical facilities.

Small size of CocKiller YUTEC allows its smooth installation in the most hard-to-reach places insects and rodents like so much.

Cockroaches are mainly nocturnal thermophilic and hydrophilic insects that are extremely mobile. Nighttime, flying species of cockroaches can get attracted by the light. They feed on plant and animal remains.

Cockroaches are one of toughest insects. Some of them can live for up to a month without food.
