

# Protection from **COCKROACHES** and other insects!

**Cockroaches are one of the most common and unpleasant problems that all homeowners and tenants have encountered at least once. These small but persistent insects can appear in any home, regardless of how clean and orderly it is. They are carriers of various diseases, including dysentery, gastroenteritis, salmonellosis, meningitis, and pneumonia.**

There are many reasons why cockroaches can appear in your home:

**1) Foraging:** Cockroaches are attracted to leftover food on tables, floors, and kitchen surfaces. Even small pieces can become a source of nutrition for these insects.

**2) Moisture:** Cockroaches like wet places, including kitchens and bathrooms. Leaking pipes, wet soil in flower pots, or standing water can create ideal conditions for their reproduction.

**3) Hidden places:** Cockroaches can enter a house through ventilation, open windows, doors, and even through holes in sewer pipes. They can hide in cracks, crevices, window sills, and batteries.

**4) Moving:** Cockroaches are often brought to the house with new things, furniture, or even in grocery bags, translating into unexpected pest problems in the new home.

**5) Neighbors:** Cockroaches from adjacent apartments can easily move through walls and air vents, making your place vulnerable to infestation.

Chemical methods of cockroach control come with numerous drawbacks. Applying them means unpleasant odors, toxic residues, careful cleaning after use, which is inconvenient in general and critically unacceptable at food factories, where safety is of paramount importance.

There is a simple and quick solution to the problem of cockroaches: CockKiller YUTEC.

This innovative insect exterminator offers a number of advantages that make it an ideal choice for pest control:

**1) Safety:** CockKiller YUTEC is absolutely safe for people and pets. It does not contain any pesticides, which makes it usable in homes with children and pets, and also near food products!

**2) Efficiency:** The unique design with open side walls and a 1-millimeter-thick base allows insects to freely crawl into the trap from four sides.

**3) Durability:** The durable metal body of the trap can withstand a weight of up to 50 kg, which allows deployment in any conditions. The trap

is resistant to mechanical damage and easy to clean.

**4) Dimensions:** The small size and weight of the device make it easy to install it even on walls and in the most inconvenient places where insects usually like to live.

**5) Innovative glueboard:** Dotted coating ensures maximum efficiency.

**6) Ease of use:** Installing and replacing the glueboard does not require any special skills. Just open the lid, replace the glueboard and close it.

CockKiller goes beyond cockroaches and also effectively destroys other crawling and flying insects, including ants, wasps, fleas, bed bugs, etc. Moreover, it can also help against mice and small rats.
